

# Memorandum

Henault

DATE : October 15, 1979

TO : Walt Sickler and Tom Rockey

FROM : A. A. Mandapat *A*

SUBJECT : Inventory of Installed Equipment Containing PCBs.

Materials Management is presently in the process of securing a disposal contractor for PCBs material and equipment containing PCBs. In order for us to work effectively with the contractor we will need a complete inventory of all installed and operating equipment containing PCBs in the system as follows:

- Rack Mount Capacitors: Number of units, size and weight (total) per unit.
- Pole Mount Capacitors: Number of units, size and weight (total) per unit.
- Transformers: Those containing PCBs liquid electrolite. Gallons of PCBs and weight drained. (Include all units containing 500 ppm PCBs and over).

Please also supply us with your best estimate or retirement of these items over the next five years. Do you intend at some future date to initiate a forced retirement of all items of equipment containing PCBs? If so, please supply us with the details of your plan.
